PROFESSIONAL SUMMARY

Founder of JuanRouter, a multi-model AI access platform for Indonesian users. I own product strategy, engineering, pricing, payments, operations, marketing, and community building. I connect API access with Rupiah payments and automated fulfillment. I also founded Sakura, a Minecraft server with custom Java plugins and multimodal AI workflows, supported by a background in full-stack development and industrial AIoT.

CORE SKILLS

Product & AI	Product Strategy · AI API Integration · Pricing & Billing · Marketing · Community
Software & Game	TypeScript · JavaScript · Java · Python · React · Next.js · Node.js · Express · Paper/Skript
Database	SQLite · PostgreSQL · MySQL
IoT & Embedded	ESP32 · ESP8266 · C/C++ · Modbus RTU/TCP · MQTT · HTTP API Integration · Sensor & Actuator Control
Infrastructure & Tools	Linux · Docker Compose · Git/GitHub · systemd · Cloudflare Tunnel · Codex · Claude Code

EXPERIENCE

Solo Founder & Product Engineer · JuanRouter *Jul 2026 – Present*

- Founded and operate a multi-model AI platform with usage-based billing, PAYG credits, subscriptions, and API/chat access.
- Built Rupiah checkout with Midtrans, automated fulfillment, a prepaid wallet, affiliate tracking, and community credit sharing.
- Own pricing, deployment, monitoring, backups, marketing, content, and the Telegram community; built a product-knowledge AI Helper Bot.
- Integrated new-api and LibreChat with Codex and Claude Code assisting development; retain product and operational ownership.

Founder & Game Systems Developer · Sakura Minecraft Server *Jun 2026 – Present*

- Developed four Java plugins with Skript gameplay for an AI assistant, Build Battle judging, shared match systems, and authenticated voice access.
- Built validated text/image-to-block planning with admin confirmation, plus a Python/Chunky pipeline for vision-based judging from five views per plot.
- Implemented queues, arena ownership, recoverable virtual-currency escrow, and tools for deployment, backups, world migration, and player-data recovery.

AIoT Engineer Intern · Chickin Indonesia *Jul – Dec 2024 · Indonesia*

- Deployed IoT and AIoT solutions across 4 cities: Yogyakarta, Solo, Boyolali, and Bandung.
- Designed and built a portable Modbus sensor configuration tool — enabling field engineers to label, troubleshoot, and reset sensor addresses on-site, eliminating office dependency for sensor configuration.
- Served as Person-in-Charge (PIC) for AI-based animal detection deployment across partner rural livestock farms.
- Led hardware assembly, firmware flashing, QA/QC testing, and client-site installation of AIoT products.

Founder & IoT Developer · SIF Skaneka (Smart Integrated Farming) *Jun 2023 – Present · Indonesia*

- Founded and led end-to-end development of an integrated smart farming product — product design, market analysis, SWOT, hardware engineering, and full-stack software implementation.
- Built an automated fish feeding and plant watering system with aquaponic water recycling, enabling resource-efficient and sustainable farming.
- Awarded Silver Medal at FIKSI 2023 (National Innovation & Entrepreneurship Festival) organized by PUSPRESNAS, Indonesia's National Achievement Center.

ADDITIONAL PROJECTS

TFE ERP · Full Stack Developer *2025 – Present*

Stack: React.js · Express.js · PostgreSQL · Docker · TailwindCSS

Comprehensive ERP platform with task dashboards, progress tracking, team assignment, and meeting notes — scalable from small teams to enterprise operations. erp.juan.web.id

SmartHome AI · AI & IoT Engineer *2025 – Present*

Stack: ESP32-S3 · C++ · Node.js · React.js · AI Integration

Complete AIoT smart home ecosystem featuring a live AI assistant for real-time intelligent device control and natural language home management.

Nevada — Smart Hydroponics · IoT Developer *2025*

Stack: ESP32 · C++ · Node.js · React.js · PostgreSQL · TailwindCSS

Full-stack hydroponics monitoring system with real-time sensor dashboards, automated nutrient management, and IoT device integration. nevada.juan.web.id

Portable Sensor Tool · Embedded Engineer *2024*

Stack: ESP32 · C/C++ · Modbus RTU · LCD UI

Industrial-grade portable tool built for Chickin Indonesia field engineers to configure, label, and troubleshoot Modbus sensors on-site. Eliminated office dependency for sensor management.

EDUCATION

Business Information Systems · State Polytechnic of Malang 2025 – Present

Computer Network & Telecommunications Engineering · SMKN 1 Kadamangan 2022 – 2025

CERTIFICATIONS & ACHIEVEMENTS

Achievements

Silver Medal · National Innovation & Entrepreneurship Festival (FIKSI 2023) — PUSPRESNAS *2023*

Top 10 National · SOBAT Competitions, Technology Category — United Tractors *2024*

Courses & Certifications

Industrial IoT: Modbus RTU/TCP with MQTT & Node-RED — PT Avisha Inovasi Indonesia *2024*

ERP & Artificial Intelligence Future Technology Workshop — Maspion IT Surabaya (Microsoft) *2024*

IoT Intern Program — Chickin Indonesia *2024*

Expo Inovasi Vokasi (INOVAKS) — Malang State Polytechnic *2025*

Ardumeka Podcast Participant — PT Avisha Inovasi Indonesia *2025*
